i Tips:

- For the classification endpoints , the prediction probability values are transformed into six symbols: 0-0.1 (---), 0.1-0.3 (--), 0.3-0.5 (-), 0.5-0.7 (+), 0.7-0.9 (++), and 0.9-1.0 (+++).
- Additionally, the corresponding relationships of the three labels are as follows: ● excellent; ● medium; ● poor;

ABOUT

This website provides easy access to comprehensive, accurate and efficient prediction of ADMET profiles for chemicals. The prediction is founded on a high-quality database of 0.37M entries spanning 77 endpoints and Directed Message Passing Neural Network (DMPNN) framework.

We utilize CSRF tokens (Cookies) to safeguard against cross-site request forgery attacks, a vital security measure for our website. We assure you that we respect your privacy and do not store or share any other personal information on your device.
